

GRAPH ALGORITHMS (CS 330)

vertices V
edges E
 $G = (V, E)$
directed \rightarrow
undirected $-$

weighted edges have "length"
labeled edges
vertices

"Structural" - Euler PATH
edges - capacity
Depth First Search

Optimization - shortest path
min cycle
max cycle
Breadth First Search

Representation

1) Adjacency structures $\Theta(|V| + |E|)$

2) Adjacency matrix $\Theta(|V|^2)$

THEORY (3) Incidence matrix - NP-hardness

vertex j is an endpoint of edge i

$\Theta(|V||E|)$

Adjacency Structure

one list/vertex (vertices)

list of edges
list of vertices

Reverse all edges
New Graph \Rightarrow Graph w/ all edges reversed

$$\Theta(|V| + |E|)$$

$$\Theta(|V|^2) = \binom{|V|}{2}$$

$|V|$ vertices

max # of edges

No parallel edges

No self loops

Simple Linear

$$G = (V, E)$$

how much space?

each edge twice

$$\Theta(|V|) \quad \Theta(|E|)$$

$$\Theta(|V| + |E|)$$

Adjacency Matrix

$$A'$$

$$A + A^2 + A^3 + \dots$$

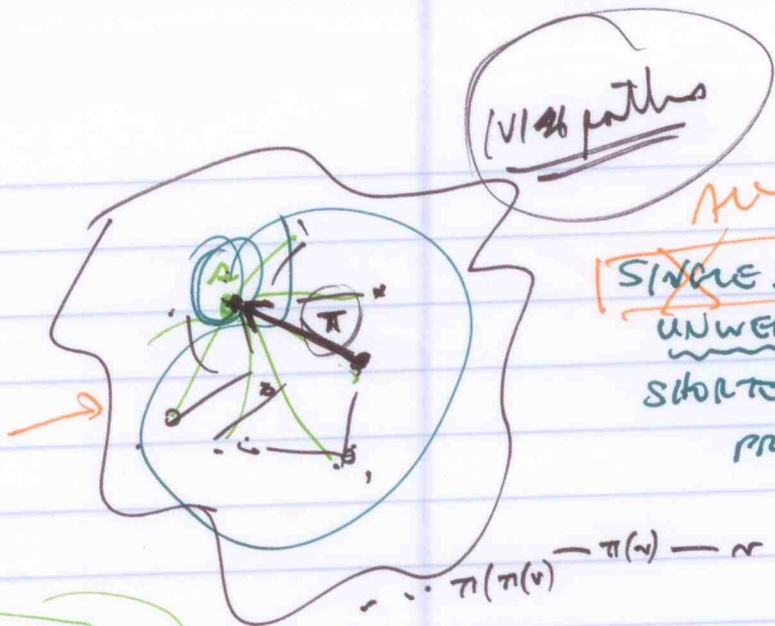

$$A_{ij} = \begin{cases} 1 & \text{if edge from vertex } i \text{ to vertex } j \\ 0 & \text{if not} \end{cases}$$

$$|V| \times |V|$$

$$\Theta(|V|^2)$$

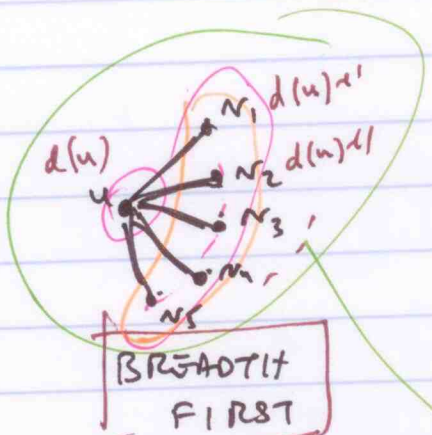

Explore Graph

small n

VI paths

SINGLE SOURCE
UNWEIGHTED
SHORTEST PATH
PROBLEM

store future
vertices
in a QUEUE

DEPTH
FIRST

$\Theta(|E|)$
 $\Theta(|V|)$

FIRST
MISTAKE

GREEDY MC

"Timestamps d
are length of the
shortest
path from s "

shortest

of edges

Σ length
of edges

VIRGIN

white

— initially all vertices are white

LIVE NON-VIRGIN

Gray

— ON the Queue

DEAD

Black

— when they're removed from Q

$|E|$

$\Theta(|V| + |E|)$

$\times \Theta(|V|)$

$\Theta(|V|^2 + |V||E|)$

Thm 22.5

UNSEEN
(WHITE)

$$\boxed{d(u) \leq d(w)}$$

$d(u)+1$
